

Task 2 – n8n API Integration Workflow

APIs Used:

- CoinGecko API
- Telegram Bot API

Workflow Overview:

1. Schedule Trigger runs every 5 minutes
2. HTTP Request fetches cryptocurrency market data from CoinGecko API
3. Code node formats and filters required fields
4. IF node checks if 24-hour price change is greater than 1%
5. Telegram node sends automated crypto alerts

Error Handling:

- Retry On Fail enabled in HTTP Request node

Output:

- Telegram notifications generated successfully for matching cryptocurrencies
